PRODUCT

Bait rodenticide in paste.

Registration of Italian Ministry of Health No.
IT/2013/00167/AUT

COMPOSITION

Bromadiolone (CAS no. 28772-56-7)	0,005 g
Denatonium benzoate	0,001 g
Attractant in sufficient quantity for	100 g

ACTIVITY & CHARACTERISTICS

Murin Forte Pasta is a ready-for-use rodent bait based on an anti-coagulant active substance known as Bromadiolone, effective against the house mouse (*Mus musculus*), the brown rat (*Rattus norvegicus*) and the black rat (*Rattus rattus*), even after just one ingestion.

Murin Forte Pasta contains a bitter substance aimed to prevent accidental ingestion by children.

The product, for professional use, can be utilized in and around industrial buildings (including goods depots and ship stowage), rural and civil buildings, homes, cellars, garages, storerooms, related gardens, and outside areas.

METHODS AND DOSAGES FOR USE

Murin Forte Pasta must be used in the doses given below. Avoid touching the product with bare hands. Use suitable gloves. The rodent bait must be positioned inside a suitable container, protected from the weather, accidental ingestion by children and non-target species and dispersion in the environment. Observe the area of infestation and place the baited containers near nests, along the rodents' paths and in the places where most frequently seen.

Dosages:

Pest	Methods and dosages
Rats	Use 60-100 g per bait point. Position bait points 10 m apart, reducing this distance for more extensive infestations. Do not move or disturb the bait points for several days after having positioned the bait. If no signs of activity are seen after 7-10 days, move the bait to an area of greater activity.
Mice	Use 20-40 g per bait point. Position bait every 5 metres, reducing the distance to 2 m for more extensive infestations. Mice are very curious and treatment may therefore prove most effective if the bait is moved every 2-3 days, when inspecting and/or refilling the bait points.

Death occurs in a few days after ingestion, typically 4-10.

Mark out the area treated appropriately, indicating the risk of poison and first aid measures. Replace bait in containers once a week if necessary. Remove dead animals as quickly as possible, disposing of them in accordance with current legislation. The product is not intended for permanent use. Organise treatments that last no more than 6 weeks at a

time. At the end of the treatment, dispose of the containers and any remaining bait in accordance with current legislation. Read the safety data sheet carefully.

WARNINGS

The containers must be safely positioned, in order to minimise the risk of tampering and accidental ingestion of bait by children or non-target animals. Always ensure that the containers are appropriately fixed and that the bait cannot be dragged away by the rodents. Avoid treatments where there is unprotected food or foodstuff. Do not use in agriculture. In the event of contamination, wash hands carefully with plenty of soap and water. Do not re-use the empty package and do not dispose of in the environment. Dispose of it in accordance with current legislation. If ingestion is suspected, contact a poison control centre. The product can be dangerous to pets or other non-target animals. If ingestion is certain, vomiting must be induced. Contact a veterinary surgeon immediately, showing him the container and label.

PRECAUTIONARY STATEMENTS

P102 Keep out of reach of children.

P103 Read label before use.

P270 When using do not eat, drink or smoke.

P273 Avoid release to the environment.

P301+310 IF SWALLOWED: Immediately call a POISON CENTRE/doctor.

P501 Dispose of contents/container in accordance with national regulation
